

Interviewer	1	So, before we begin, I'm going to give a summary on the features of the tool, okay?
Participant	2	Okay.
Interviewer	3	So (for the) set up. All you need is one chessboard, a camera and a computer to run the program, that's all.
	4	One feature the program will have is that you can do puzzlesolving, like you do on chess.com. I think you are familiar with this.
Participant	5	Okay, okay. (Using) Like stock fish and stuff.
	6	Exactly.
	7	You will have features like feedback from stockfish.
	8	So when you do a move, you get feedback.
Interviewer	9	And also the program, when you do a move, it will save it.
	10	And then once a game is finished, you will get a file with with the game move history.
	11	So we will be also able to analyze and study the game.
Participant	12	Okay.
Interviewer	13	To set up the app, all you need is to set up the camera at a 90 degree angle, above.
Participant	14	All right.
	15	And then you will be able to calibrate the camera so that it matches the board corners.
	16	It only captures the board.
Interviewer	17	It's easy.
	18	All you have to do is click four times on the corners.
	19	So click once on each corner and then it will set it up.
Participant	20	Okay, sounds easy.
Interviewer	21	So for an intro, I'm going to get a bit of your chess background.
	22	So, how long have you been playing chess?
Participant	23	Like five years?
Interviewer	24	Do you play it frequently or here and there?
Participant	25	Here and there.
Interviewer	26	Do you have a training routine or do you just play it whenever you feel like it?
Participant	27	Play it when I feel like it.
Interviewer	28	What do you enjoy most about learning chess?
Participant	29	The learning curve (and the fact that) It's hard.
Interviewer	30	If you want to actually learn Chess, would you prefer doing it digitally on a website or with a physical chess board?
Participant	31	Digital because it's much simpler.

Interviewer	32	So, from your first impressions, from the description that I gave you of the tool, what's your gut reaction?
	33	Does anything seem confusing or maybe how confident intuitive?
Participant	34	No, it sounds easy to set up, to be honest.
Interviewer	35	Do you think that there might be any difficulties setting it up?
	36	No, no.
Participant	37	Just a camera 90 degrees angle and clicking a bit, to be honest.
	38	Sounds pretty good.
Interviewer	39	Imagine you're setting it up and you're pointing your camera at the board and tapping to start.
	40	Do you think any questions or concerns would arise about how easy it would be?
Participant	41	No, I don't think so.
Interviewer	42	if you were to actually be using the tool, would you be concerned that maybe you couldn't trust the tool?
	43	Maybe it might make mistakes or errors?
Participant	44	There will be concerns, but if it's stockfish, I wouldn't think there will be a errors or anything.
	45	Okay, Irrelevant to stockfish, though, just as computer vision.
Interviewer	46	So actually understanding the moves being made rather than analysis.
	47	Do you think there will be concerns that maybe you do a move and it won't detect it correctly?
	48	I wouldn't think so.
Participant	49	Unless there is a bug, there.
	50	There may be, to be honest, but it will be pretty much fixed, I think, right?
Interviewer	51	Okay, so, I think that you would put your trust in it unless it clearly shows a mistake.
Participant	52	Yes, yes.
	53	But then if it's will be fixed, so it would be all good to go.
	54	Okay, then moving on from the intro of just setting up and trust, if you were to actually integrate the stool into your usual practice.
Interviewer	55	So let's say you usually just log into chess.com and play.
	56	Do you think it would be possible for such an app to be integrated into this routine?
Participant	57	It can be to practice, to be honest, but in real matches, I don't think in real life matches.
Interviewer	58	What might hold you back from, actually in integrating it?
	59	It feels like cheating.
Participant	60	I would prefer a real challenge, to be honest.

Interviewer	61	So let's say that, well,, when you practice, for example, puzzle solving.
	62	So imagine that this program does puzzle solving the exact same with the same type of syntax.
	63	That's stockfish would give you for chess.com, for example.
	64	Would you prefer just loading up chess.com or do you think it's possible you might like to train on a physical chessboard with this program?
Participant	65	To be honest, it can go both ways.
	66	I want to practice more traditionally, I can use this app if I want to practice digitally, I'll practice on Chess.com.
Interviewer	67	So you think that there's a distinction between playing digitally and physically?
	68	You might learn different things from both.
Participant	69	Yes.
Interviewer	70	So, which of the features that I mentioned, which are puzzles on a physical chess board, instant feedback or game history?
	71	Do you think would help you the most as you learn?
	72	What?
Interviewer	73	Okay, so from the features that I mentioned, so you will have puzzle solving, you will have feedback on game moves and you will also have a game history where you can do post-game analysis.
	74	Which of these three features do you think would be the most useful for you to actually learn from your mistakes?
Participant	75	The analysis, I think.
Interviewer	76	The post-game analysis?
Participant	77	Yes
Interviewer	78	Now, for some feedback from your end, if you could tweak something from this program. What would you change?
	79	So this could be anything, to give you a bit of a run-down of how it would go from step one.
	80	So what you would do is you would set up, like I mentioned with the camera and the chessboard.
	81	So you would do that manually.
	82	Then you have to set up the chess position through text.
Participant	83	So you would have to go online, search up an FEN position converter and then you would get a result, which basically represents a Chessboard position.
	84	Right.
Interviewer	85	So you would have to manually set up the starting position, retrieve the FEN, and then you would provide the program with the FEN.
	86	So that is another step that we would have to do.
	87	Then from then on, it is automatic.
	88	Every move you make will be automatically read from the program and

Interviewer			analyzed.
	89		So from those from that setup, what do you think would be better to change?
Participant		90	To be honest, it sounds pretty easy, so I don't think I will change anything.
Interviewer		91	You wouldn't change anything?
Participant		92	Nah.
	93		Okay, just to give you some idea, maybe just just to see your actual thoughts.
	94		So you wouldn't, for example, say that, I don't know.
Interviewer		95	I think, in my opinion, it would be better if you could it the starting position on its own, for example.
	96		You have freedom to choose anything.
	97		There's no wrong answer. You judge can and criticize it.
	98		There's nothing wrong with it.
Participant		99	That sounds pretty easy to set up, to be honest.
	100		So I don't think I will change anything from.
Interviewer		101	Okay, so from your impressions of the tool, do you think you would you think you would recommend it to anyone else you know that plays chess?
Participant		102	Yeah, I think I would if they prefer traditionally.
Interviewer		103	Do you think you know anyone that plays chess traditionally?
Participant		104	Not really.
Interviewer		105	But if you did, you would recommend it.
	106		Yes, yes.
Interviewer		107	Okay, then that's all, thank you.
Participant		108	Thank you.
